

INSTRUCTIONS

The GoldenRod Model 107 Sprayer Cleaner has a quick snap-on connection that fits onto an ordinary tire inflating type air chuck. Squeeze the handle to start the air flow. Adjust the mixture by turning the nozzle to the right or left and tighten locknut to the nozzle when at the desired position. NOTE: At least 30 pounds of pressure is necessary for successful operation. To clear suction tube, first remove can, then hold your hand over nozzle which will blow the air back through the suction tube. NOTE: Do not hold hand over nozzle unless can is first removed. To do so will bulge the can.

CAUTION: PROPER EYE PROTECTION, EITHER SAFETY GLASSES OR GOGGLES, SHOULD BE WORN AT ALL TIMES WHEN WORKING WITH COMPRESSED AIR AND SOLVENTS.
