

IMPORTANT SAFETY INFORMATION

- Always wear eye protection when using this tool.
- Keep fingers away from crimping end when operating tool.

OPERATING INSTRUCTIONS – Open the handles and insert a T-Post Grip into the jaws. Angle the tool over the fence wire with the wire resting in the notches on the side plates. Move tool to position the wire on the fence post. Press the Grip tight against the fence post and close the Grip until the legs are tight against the back of the post. Do not use excessive handle force. The handles do not need to be fully closed to tighten the Grip against the post.

MAINTENANCE– Keep the tool clean from debris to ensure proper operation. Tool life can be extended with occasional light oil on the riveted and bolted joints. Tighten or loosen the lock nut on the handles if needed. The lock nut should be tight enough to prevent unintentional movement of the tool, while still allowing easy operation.
